

Season 02 - Week 01

Problem Statement

Mr. Alex, a distinguished scientist, is currently visiting Chennai and is captivated by the Tamil culture. He has decided to write a blog about Chennai in Tamil, but due to limited proficiency in the language, he seeks your expertise in UiPath automation.

Your task is to create an automation that:

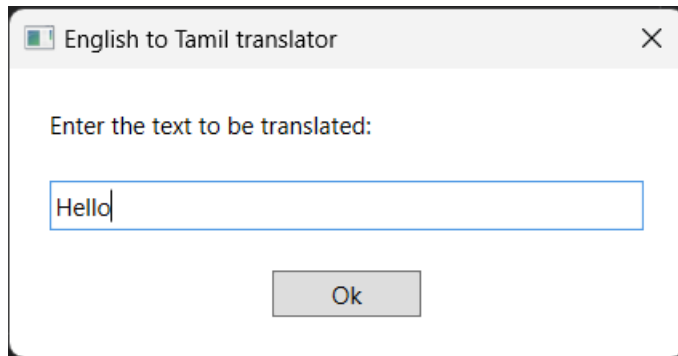

1. Accepts user input in English.
2. Utilizes Google Translate to translate the English text into Tamil.
3. Displays the translated text in a message box.

Ensure the automation provides a seamless experience for Mr. Alex, allowing him to express his admiration for Chennai in the Tamil language effortlessly.

Hint: For the storage of the translated text, you may want to use the “Get From Clipboard” activity of UiPath Studio.
